Prasitoarele **EGEDAL / Badalini** sunt deosebit de robuste si foarte eficiente pentru lucrarile de intretinere a culturilor, distrugand in proportie de peste 95 % buruienile dintre randuri.

Toate unitatile de lucru functioneaza independent una fata de alta, astfel incat vor urmari intocmai linia terenului si neregularitatile acestuia. Fiecare unitate va putea depasi obstacolele din calea sa: pietre, radacini.

Cutitele actioneaza in interiorul unei carcase metalice astfel ca este impiedicata acoperirea plantulelor, in timpul lucrului cu sol – aspect deosebit de important in special in cazul plantelor tinere, de mici dimensiuni.
